ABSTRACTED-PUB-NO: JP2000256862A

BASIC-ABSTRACT:

NOVELTY - The precursor liquid containing the raw material of oxides of lanthanum, and manganese and one of calcium, strontium or barium is applied on the objective surface to form a membrane, which is irradiated with radiation of wavelength equal to or less than 360 nm to crystallize it into the perovskite structured composite oxide.

DETAILED DESCRIPTION - The composition of the composite oxide is  $(La_{1-x}M_x)MnO_3 - \delta$ .

M = Ca, Sr or Ba;

x = 0.09-0.50; delta = undefined.

USE - None given.

ADVANTAGE - Perovskite structured composite oxide membrane can be developed on the surface of objectives with low thermal resistance such as plastics,

CHOSEN-DRAWING: Dwg. 0/1
